

ANEMOMETER UPDATE #4
(WEEK OF DECEMBER 6 TO DECEMBER 12, 2009)

The large Colorado Low system passing through the region has produced winter storm conditions with very high winds (>50 knots) and very high waves (>3 m) offshore in Lake Ontario.

The construction jack-up barge and related equipment have been towed back to harbour as a precaution. The weather conditions will be re-evaluated the week of December 13 – December 19, 2009.
